(54) Title: A PROCESSING METHOD OF PROVIDING SUBSCRIBER USER EQUIPMENT LOCATION INFORMATION TO REQUEST SIDE

(54) 发明名称: 一种向请求端提供目标用户设备位置信息的处理方法

(57) Abstract: The present invention disclose a processing method of : providing location information of subscriber user equipment to request side, during process of UE location information of request subscriber at initiate side and requiring LCS system to provide subscriber UE location information to outside request side after the LCS system transmit subscriber UE location information to request side, add the information response mechanism of the request side to return whether can process subscriber UE location information, thus LCS system can obtain final performance result of location service. Further, LCS system return the response of whether the request side can process location information of subscriber UE thereby the initiate side equipment can exactly obtain the final performance result of the location service. In addition, the present invention contain two manner of processing they can be used independently or combining each other it not only can obtain more advantage but can also have flexible selectivity.
